Majd Kamas

Backend Web Developer - Laravel

majdkamas@gmail.com • +963 981 193 125 • Damascus, Syria

LinkedIn • GitHub

Profile

Software background developer (Backend Developer) specializing in building systems and applications using Laravel (PHP) and ASP.NET Core (C#). I have experience in database design (MySQL), building RESTful APIs, and applying OOP concepts. Distinguished by the responsibility of managing projects and completing them efficiently under pressure.

Education

Technical Diploma in Software Engineering at Computer Technical Institute, Damascus, Syria **August 2024 - Present**

Specializing in the basics of software engineering, database design, and web application development.

Bachelor of Communications Technology (BACT) at Syrian Virtual University (SVU), Damascus, Syria **May 2026 - Present**

Study of communications technology and information technology to support the software and engineering background

Skills

Backend Technologies: PHP, Laravel, C#, ASP.NET Core, RESTful APIs, OOP

Databases & ORM: MySQL, Entity Framework Core, Eloquent ORM, Database Design

Frontend & Templating: Blade Templates, HTML5, CSS3, JavaScript

Tools & Version Control: Git, GitHub, Postman, Composer

Projects

An integrated system for managing a charitable association • GitHub

A fully internal operations and beneficiary management system built using PHP (Laravel), MySQL, and Blade Templates.

- Take full responsibility for successfully implementing and developing the project individually and ensuring its delivery on time despite simultaneous study commitments.
- Design an advanced database architecture and role and authority management system (RBAC) to ensure data confidentiality and resource management efficiency.

Online clothing store • GitHub

Integrated web application for a clothing store built using ASP.NET Core (C#), Entity Framework

- Build mechanisms for browsing products, managing the shopping cart, and completing orders smoothly.
- Develop a dynamic control panel to efficiently manage inventory, orders, and products.

Pharmacy management system • GitHub

A desktop application for sales, inventory, and invoicing management built using C# Windows Forms

- Apply object-oriented programming (OOP) concepts to build a clean, easy-to-maintain code structure.
- Automate inventory accounts, print invoices, and track drug expiration dates.
